

Conditional Control Statements: If & Case

Case Statements: CASE statement to evaluate a condition and return one or more result expressions. CASE can be used in any statement or clause that allows a valid expression. For example, you can use CASE in statements such as SELECT, UPDATE, DELETE, and SET, and in clauses such as select_list, IN, WHERE, ORDER BY, and HAVING.

Example:

```
Select Case When MaritalStatus = 'M' then 'Married'
           when MaritalStatus = 'S' then 'UnMarried' else 'Data Not Provided' end As
Derived_MaritalStatus, MaritalStatus, * from DimEmployee
```

IF...ELSE Statements: The IF...ELSE statement is a control-flow statement that allows you to execute or skip a statement block based on a specified condition.

Example:

```
Declare @salaryA money , @salaryB money
```

```
Select @salaryA = YearlyIncome from DimCustomer Where CustomerKey = 11006
Select @salaryB = YearlyIncome from DimCustomer Where CustomerKey = 11007
```

```
If @salaryA = @salaryB
Begin
    Print 'Both yearlyIncome is Equal'
End
Else
begin
    Print 'Both yearlyIncome is Not Equal'
End
```

While Loops: Sets a condition for the repeated execution of an SQL statement or statement block. The statements are executed repeatedly as long as the specified condition is true. The execution of statements in the WHILE loop can be controlled from inside the loop with the BREAK and CONTINUE keywords.
